Continuation of 11, does NOT place the application in condition for allowance because: Regarding Applicant's argument in pages 9-11. the Examiner believes that in order for the coordinates to be looked up in the registry to yield an appropriate activity, they are extracted from the link on the document. Thus, the absolute coordinates are encoded in the hyperlink under the broadest reasonable interpretation. They must be encoded in the hyperlink on the document since they are extracted from the link and used to look up the cooresponding activity in the registry. The Examiner believes the language Applicant quotes on page 9 lines 12 and 13 of the response clearly teaches this. Regarding Applicants argument that Robinson does not teach a table, the Examiner contends the registry is the table as claimed. Regarding Applicant's arguments in pages 12 and 13, the Examiner believes the Musk would have suggested and alternative implementation for Robinson. Thus, the Examiner contends the reason to have combined these teachings is valid. Regarding Applicant's arguments in pages 14-22, the Examiner contends that by using the technologies of Moran and Thompson to modify and enhance the invention disclosed by Robinson, the camera / projector system employed by Robinson would no longer have been used. The suggestion to make such a modification to Robinson is contained in the advantages of a using the pressure sensitive grid of Moran and TOLED display of Thompson, which the Examiner described in the previous action. One of ordinary skill in the art at the time of the invention would have been keen to the fact that these alternate input and output prior art devices might have offered advantages over the camera / projector system specificatly described in Robinson. The Examiner believes that Applicant's argument questioning the Examiner comparison of the pressure sensitive grid to the claimed touch foil is not made in consideration for the broadest reasonable interpretation of the claimed touch foil. Regarding Applicant's arguments in pages 23 and 24, the Examiner believes the Musk would have suggested and alternative implementation for Robinson. Thus, the Examiner contends the reason to have combined these teachings is valid. For at least these reasons, the EXaminer maintians the rejections set forth in the previous office action.
